In today's volatile economic environment, it is critical for banks to understand the impact of significant stress on the bank's capital adequacy. This is increasingly being requested in examinations and bankers have received positive comments if a capital stress is being conducted prior to any potential request. After the capital is stressed, the bank should prepare a capital contingency plan to consider options for improving capital if the stress event occurs. It is always better to consider these options prior to the event (proactive) as opposed to after the event (reactive). This webinar will provide an easy-to-follow methodology for completing the stress, components of a capital contingency plan, and will cover options for raising capital.

Continuing Education: Attendance verification for CE credits provided upon request.

HIGHLIGHTS

- The importance of stressing capital
- How to easily stress capital
- How regulators view differing levels of capital
- How to prepare a capital contingency plan
- The pros and cons of different methods of raising capital based on current successes and/or failures

WHO SHOULD ATTEND?

This informative session is designed for management and board members who want to be proactive in dealing with bank capital issues.

MEET THE PRESENTER

**Gary J. Young, CEO,
Young & Associates, Inc.**
