Tuesday April 27, 2010

## Incident Response Program: Before & After a Data Breach

Telephone / Webinar scheduled 2:00 - 3:30 pm

Incident response planning, recovery, and testing are receiving strong focus by regulators and banks. Management's goal is to minimize damage to the institution and its customers, through containment and restoration. How is management required to address unauthorized access or use of customer information? Learn the process banks should use to identify, manage, remediate, and test security incidents. Understand how to assess the nature and scope of the incident; how to identify what customer information has been accessed or misused; the importance of promptly notifying your primary federal regulator and appropriate law enforcement authorities; and filing a timely SAR. National and state data-breach laws that your bank must comply with will be outlined and a step-by-step roadmap to prepare an efficient incident response program will be provided.

### HIGHLIGHTS

- What is a data breach?
- Define unauthorized access to customer data
- Incident response program
- Develop an incident response process
- Incident response testing and policy
- And Much, Much More...

### SPEAKER:

**Dr. Kevin F. Streff**, Secure Banking Solutions

### WHO SHOULD ATTEND:
